Main areas of research

My research has focused upon three main issues.

First, planning theory: I have focused in particular on the relationship between the technical components and political components of planning, and of the role of planners, both from a theoretical point of view, and from an empirical viewpoint - with reference to the specific case of the Israeli-Palestinian conflict over Jerusalem.

Second, the relationship between space regulation and relevant ethical matters: I have focused on questions of tolerance and pluralism within public and private spaces.

Third, the relationship between spatial planning and informality in the urban South.

Academic Career
